Monthly Review & Outlook (月度回顾和前景展望)

The net return of Greenwoods China Healthcare Fund Tranche A is **3.02%** for November 2021 and **-8.09%** year-to-date, which is the same for Tranche C and D. During the period, the monthly and YTD return was -5.14% and -9.86% for the MSCI China Healthcare Index, respectively.

Portfolio Review and Outlook

In November, notwithstanding extreme volatilities in the market, the Fund posted a positive return of 3% (vs MSCI China Healthcare -5.1%). Both our long and short positions have contributed to the performance. Although the Fund's long positions were slightly over 60%, it contributed an absolute return of more than 200bps, while certain short positions have contributed nearly 100bps of the gain during the month. This illustrates our investment strategy has worked out well.

We have been worrying about the stretched valuations and over-crowded institutional holding risks amongst popular sectors such as CRO and medical services since the beginning of the year. In November, some leading CRO stocks saw a significant correction. For example, Hangzhou Tigermed was down 18% for the month. Leading medical services names, such as Topchoice Medical and Aier Eye Hospital also retreated 17% and 12%, respectively. On the contrary, our Fund has more exposure towards sectors such as cell gene therapy, COVID-19 oral drugs and medical equipment, which have done well with positive returns.

Considering the market volatility towards the year-end, our fund maintains a low net exposure in December, and we will continue to adhere to our strategy of being selective in picking stocks. In terms of stock selection, we believe that upstream segment is better than end-consumer, while we prefer companies with more overseas businesses than domestic businesses. For the next 2-3 years, we believe the overall growth rate of China's pharmaceutical industry can reach the level of 1.5 to 2 times of the GDP growth rate. Nevertheless, the policies are becoming more complicated and long-term visibility is getting lower, hence we are confident that our experience and capability in stock-picking will enable us to continue to do a good job for our investors.

COVID-19 Updates

In November, the Omicron variant broke out in South Africa and spread rapidly to countries around the world. The most worrying factor of Omicron is the number of its mutations. It has more than 32 mutations on the S protein, of which 15 are located in the more critical Receptor-Binding Domain (RBD). In contrast, the Delta variant has 15 mutations on the S protein, where only three are in the RBD. Those mutations known to cause vaccine immune escape, such as N501Y, Q498R, E484A, are all found in Omicron. Therefore, it can be inferred that Omicron has a strong immune escape ability and the effectiveness of existing COVID vaccine and neutralizing antibodies will be greatly reduced. The Delta variant is highly infectious but has a low immune escape ability, thus the existing vaccine and neutralizing antibodies are effective for most patients with the Delta variant. However, prevention of Omicron requires booster shots and even a new Omicron vaccine.

Currently, there is no doubt European and American countries will see a fresh round of outbreak with Omicron variant, however, the scientific community has not yet determined whether its toxicity would be weaker than that of the Delta variant. Based on the existing data, the hospitalization rate of Omicron patients is not significantly different from that of Delta patients, but the mortality rate of severe patients with Omicron is significantly lower, which is in line with the hypothesis that COVID-19 will become influenza. WHO predicts that the global COVID-19 pandemic will end in 2022, but we believe that COVID-19 may continue to exist for at least another two years, and there could be investment opportunities in relevant oral drugs and vaccine companies and we are closely monitoring such development.

Fund Strategy（基金策略）

Greenwoods China Healthcare Fund's principal investment objective is to seek to achieve attractive absolute long-term returns by employing a fundamental approach, through long and short investments in China-related equity securities in the healthcare and medical industry.

The Manager expects to focus primarily on long-biased opportunities in the equity securities of healthcare companies that are headquartered or principally engaged in business in, generating a substantial portion of their revenues from, or substantially impacted by developments within China. The Manager may invest in the equity securities of issuers that are organized or listed within or outside of China, including Hong Kong SAR, Singapore, Taiwan, and the U.S., on an opportunistic basis and/or if the Manager considers China to be a significant driver of the security's prospects.

Greenwoods adopts a combination of bottom-up and top-down approaches, and aims to implement both long and short strategies and trading tactics to invest in healthcare companies that it believes can benefit from China's favorable policies, or has strong product pipeline, solid R&D capability, high barrier of entry, good track records, sound financial position, motivated management, strong competitive advantage, in combination with compelling valuation.

Greenwoods may also sell short index futures and/or stocks of companies in the healthcare sector that it considers overvalued or exhibit vulnerability to regulatory changes, weak financial position, poor management, unfavorable competitive advantage, and low growth potential.

Once target companies are identified, Greenwoods perform deep and thorough due diligence and investigation utilizing local resources, under its proprietary due diligence system, 360DD, to ensure solid understanding of target companies' growth potential, SWOT, quality of accounting book, risks, as well as the character and capability of their senior management. Moreover, Greenwoods believes it has built an extensive network of advisors of macro policies and various industries, who have insights on China's policies and industry outlook than most financial analysts, and are more up-to-date on the changes. So Greenwoods believes its team has deep understanding of the macro trends, policy developments, companies' strengthen and risk, and senior management's capability before making long or short decisions.

To achieve extraordinary performance, the Fund offers options for investors to elect to invest into a class with a "side pocket" limit for less liquid securities, such as bonds, PIPEs, pre-IPOs, and private equities. Performance fee will NOT be charged on any side pocket investment until a side-pocket investment is realized. Investments into side pickets are not redeemable until the investments are exited or liquidated, so investors who expect to need full redemption when redeeming from the Fund should invest into the class without the side-pocket capability.

Potential Risks （潜在风险）

As an equity fund, the Fund involves high risks, and Fund managers do not guarantee the Fund's principal and return. Some of the risks described in the Fund's Private Placement Memorandum (PPM) are summarized below, which does not cover all the risks of the Fund. Different risks are discussed in more details in PPM's "Risk Factors" section and other sections. Potential investors should carefully evaluate all the risks described within PPM and should consult their investment, legal, and tax advisors regarding these risks before commencing into any investment decisions.

Risk of Political and Economic Instabilities

Political and economic instability, as well as wars, riots, terrorist attacks, natural disasters and epidemic outbreaks, and other systemic events may have adverse effects on Fund performance.

Market Risk

Market fluctuations, suspension of stock trading, restrictions on foreign investor investment in securities and other market risks may affect the performance of the Fund.

Concentration Risk

The Fund is focused on investments in the medical and healthcare sector, which is not as diversified as funds investing into more than one sector;

Short-selling Risk

As part of hedge Fund investment and trading strategies, the Fund can sell short securities. Short selling may theoretically involve unlimited losses, as theoretically the price of securities may rise without limit. The Fund does not guarantee that it will not suffer losses due to short positions, and if the short-selling results in losses, there is no guarantee that these losses can be offset by the gains of any long positions.

Leverage Risk

As a hedge fund, the Fund uses leverage from time to time in the long and short selling process. The PPM has set limits of leverage, while leverage can still enlarge the risk of the Fund.

Risk of Investment in Small-cap Stocks

The Fund can invest in med- and small-cap securities. Compared with the securities of large, listed companies, the securities companies that have obtained such securities have relatively little research coverage and the liquidity of the stock may also be relatively low.

Derivative Instruments Risks

The Fund may use derivatives to establish or hedge positions, which may involve additional risks. In unfavorable circumstances, derivative tools may not be able to achieve the intended purpose effectively and may cause losses to the Fund.

Credit Risks

The Fund may invest in fixed income securities (such as bonds) issued by different companies and other entities. If so, the Fund may be exposed to the risk that individual issuers will default or fail to fulfill other obligations. Also, assets of the Fund may be custodized with prime broker(s) of the Fund, and the insolvency of any prime broker may affect the Fund's assets custodized with the prime broker.

Redemption Risks

If the investors redeem a large number of shares in the short term, it may cause the fund managers to have to rapidly liquidate securities, which may reduce the value of the Fund's assets or disrupt the investment manager's investment strategy.

Key Man Risk

The Fund's operations depend on the fund manager. If the key fund manager dies, leaves the company, loses legal capacity or goes bankrupt, or has major personnel changes, the operation of the Fund may be adversely affected.
